ZOMILON Cream is an advanced antifungal antibacterial steroid cream formulated with Miconazole Nitrate 2% w/w, Neomycin Sulphate 0.5% w/w, and Fluocinolone Acetonide 0.01% w/w. It is indicated for the treatment of fungal skin infections associated with inflammation, itching, redness, eczema, dermatitis, athlete's foot, and jock itch.

The combination provides effective antifungal, antibacterial, and anti-inflammatory action for faster symptom relief and skin recovery.

## Composition

Each gram contains:

**Miconazole:** 2% w/w

**Neomycin:** 0.50% w/w

**Fluocinolone:** 0.01% w/w

**Cream Base:** q.s.

## What is ZOMILON Cream?

ZOMILON Cream is a clinically effective fungal infection cream designed to treat fungal skin infections accompanied by inflammation and bacterial contamination. The combination of Miconazole, Neomycin, and Fluocinolone offers triple-action therapy by controlling fungal growth, preventing bacterial infection, and reducing inflammation.

This antifungal cream for skin infection is widely used in dermatological practice for managing various skin disorders where itching, redness, scaling, and discomfort are present.

## Indications & Uses

ZOMILON Cream is indicated for the treatment of various skin conditions, including:

- **Fungal Infections:** Effective against dermatophyte infections such as tinea (ringworm) and candidiasis (yeast infections).
- **Bacterial Infections:** Treats secondary bacterial infections associated with fungal skin infections, providing a dual-action solution.
- **Dermatitis:** Alleviates symptoms of inflammatory skin conditions such as contact dermatitis and eczema.

- **Intertrigo:** Suitable for treating inflammation in skin folds, where fungal and bacterial infections are common.
- **Infected Eczema:** Helps manage cases of eczema complicated by bacterial or fungal infections.

## Specific Treatments:

- Ringworm treatment
- Athlete's foot & Jock itch treatment
- Eczema itching relief
- Dermatitis treatment cream
- Skin rash & skin allergy itching
- Inflamed skin infection & fungal rash
- Skin redness treatment

## Mechanism of Action

**Miconazole Nitrate Cream:** Inhibits fungal cell membrane synthesis, effectively controlling fungal growth and helping eliminate infection.

**Neomycin Cream:** Acts against susceptible bacteria that may infect damaged or inflamed skin.

**Fluocinolone Cream:** A corticosteroid that helps relieve itching, swelling, redness, and irritation associated with skin infections.

## Dosage and Administration

- Wash and dry the affected area before application.
- Apply a thin layer of cream over the affected skin.
- Use as directed by your healthcare professional.
- Avoid excessive application.
- Continue treatment for the prescribed duration even if symptoms improve earlier.

*The dosage and duration depend upon the severity and location of the infection.*
